RESTORATION PRINCIPLES -- ClimateActionNetwork

CAN acknowledges and encourages the outstanding role of carbon sequestration in natural ecosystems in the struggle to limit global warming to 1.5o C...

CAN urges all governments to:

protect primary forests

halt deforestation and peatland degradation

restore lost and degraded forests

in a sustainable and participatory manner, while strengthening the rights of indigenous peoples and local communities.

Global, rapid and deep decarbonization to meet the 1.5°C challenge will require both maximum emissions reductions in the energy and industry sectors **as well as steep and ambitious efforts to store carbon in natural ecosystems.**
